Good dairy farming practice also ensures that the milk is produced by healthy animals in a manner that is sustainable and responsible from the animal welfare, social, economic and environmental perspectives. So implementing good dairy farming practice is good risk management for the short and long term future of the dairy

cattle and buffalo, have an important economic role in village farming systems to provide milk, draught power, manure, meat and hides. Milk is an important constituent in the diet of large populations in countries like India and Pakistan. Its value is being increasingly recognized in other countries in the region too.
